

How to Create a “required” Field

You can set any field on your overlay as required.

In order to do so, you need to add “*required*” class to that field in HTML/CSS editor.

```
<input name="phone" placeholder="Enter phone here" type="text" class="required" data-required="Phone is required">
```

The default text will be “You don’t fill all the fields”. If you wish to change it for a specific field, in HTML/CSS editor add an attribute `data-required="Place your text here"`.
