

How to Send Collected Lead Data to URL

You can send collected emails and other data in a URL after your visitors convert on a popup. Simply check *"Pass lead data to redirect URL"* when you're pasting a link to redirect.

The image shows a configuration interface on the left and a preview of a popup on the right. The configuration interface is titled "HTML/CSS Editor" and includes a "GET MY 15% OFF NOW" button and a "No, thanks. I'd rather pay a full price" link. Under the "OPTIONS" section, the "Select action after event" is set to "Redirect". The "Redirect URL" is "http://yoursite.com". The checkbox "Pass lead data to redirect URL" is checked, and "Open redirect URL in a new window" is also checked. The "Select popup animation" is set to "None". There are also checkboxes for "Hide overlay close button" and "Hide overlay by clicking on background", both of which are unchecked. The popup preview on the right has a blue background with white text that reads "Wait, we have a special offer" and "Enter your email and get 15% off!". It features a white input field with the placeholder text "Enter Email Address Here", an orange button with the text "GET MY 15% OFF NOW", and a link at the bottom that reads "No, thanks. I'd rather pay a full price".

Now, leads will be redirected to a link like yoursite.com/thank-you?collected-email&collected-name.
