

## How to Send Collected Lead Data to URL

Picreel lets you send collected emails and other data to a URL after visitors convert from a pop-up.

**Here's what the URL will look like after you enable the settings to send the collected lead data to the URL:**

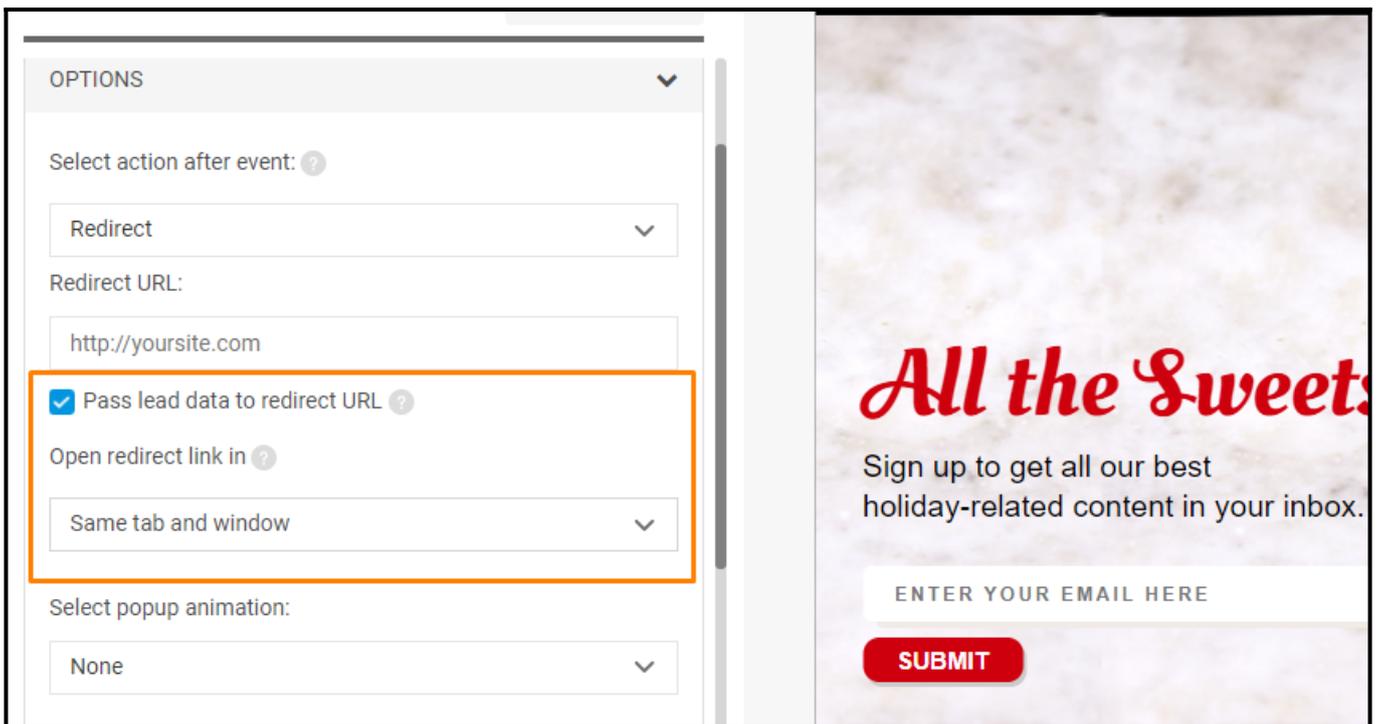

### To send collected data to URL:

**Step 1:** In your Picreel account, Go to **Campaigns**>>**Edit** to open the '**Edit Design**' section.

**Step 2:** Click '**Options**' on the left panel and choose '**Redirect**' under '**Select action after event.**'

**Step 3:** Check '**Pass lead data to redirect URL**' when you're pasting a link to redirect.

**Note:** You can only enable this setting when you choose to **open a redirect link** either in the **(1) Same tab and window** or **(2) New Window**. If you choose to open the redirect URL in a New Tab, you won't see this feature.

Now, leads will be redirected to a link like [yoursite.com/thank-you?collected-email&collected-name](https://yoursite.com/thank-you?collected-email&collected-name).

*That is all about sending collected lead data to the URL.*
